Behaviour And Ecology Of Riparian

Riparian mammals are those such as otters that live in close association with rivers and streams. They are highly adapted to this semi-aquatic way of life, and increasing pollution, and use of rivers and streams and their banks by humans for other purposes have profound effects on the habitat's suitability.

Many mammals, such as otters, live in close association with rivers and streams, feeding in them, or using them as a place of safety or means of escape from predators. The distinct adaptations that riparian mammals have evolved in order to live in these environments also handicap them for living elsewhere.
