Wireless and Cellular Communications - William C. Y. Lee ...

A cellular network or mobile network is a communication network where the last link is wireless. The network is distributed over land areas called " cells ", each served by at least one fixed-location transceiver, but more normally, three cell sites or base transceiver stations.

Cellular network - Wikipedia

Mobile Telecom Franchises. Mobile Telecommunications Franchises allow authorized companies to install and operate telecom equipment on street light poles, traffic light poles, and utility poles to facilitate wireless communications in the five boroughs.

Mobile Telecom Franchises - DoITT - New York

Sometimes, telecommunication systems are "duplex" (two-way systems) with a single box of electronics working as both the transmitter and a receiver, or a transceiver. For example, a cellular telephone is a transceiver. The transmission electronics and the receiver electronics within a transceiver are actually quite independent of each other.
