appropriate than an exact answer. Overview. Many algebraic expressions contain radicals. These radicals may contain numbers and/or variables. Some of these radicals can be simplified prior to simplifying the entire algebraic expression. The value of some radicals needs to be estimated in order to solve problems that are in a contextual format.

Well, one, we could use an exponent property here, or I guess we could call it a radical property, that if I have the square root of a times the square root of b, that's going to be equal to the square root of a times b. So in this case, a would be 0.4 and b would be 1.25, so this is going to be the same thing as the square root of 0.4 times 1.25.
