Secrets Of Creation Prime Numbers
This is the theorem that states that every counting number greater than 1 can be factorised into its prime constituents, i.e., every number can be expressed as a unique product of primes. A rigorous proof by contradiction, or reductio ad absurdam, is laid out in Appendix 2 for those with some mathematical background, but a nice "proof" that will satisfy through examples is presented in the body of the text.

The prime numbers are kept secret. Messages can be encrypted by anyone, via the public key, but can only be decoded by someone who knows the prime numbers. The security of RSA relies on the practical difficulty of factoring the product of two large prime numbers, the "factoring problem". Breaking RSA encryption is known as the RSA problem.
